

A great new exhibit!

CrossOver™ to a great new exhibit

CrossOver™ is a structural exhibit system that allows you to enhance your current pop-up - whatever the brand - by linking it to LUMINENTS® workstations, adding function and style.

CrossOver lets you:

Support computer workstations, video monitors, and product shelving

Add countertops and locking storage

Incorporate canopies with built-in lighting

Yet still ship in portable, roto-molded, wheeled cases...

CrossOver from your pop-up to LUMINENTS.

CrossOver is the most innovative upgrade to pop-up exhibits in over 20 years, because it can link every major pop-up product to the style and function of LUMINENTS.

Conversions are achieved using a unique new universal hinging connector that attaches the vertical strut of virtually any pop-up to a LUMINENTS post. From there, the possibilities are endless.

CrossOver is available in a wide variety of configurations to add new features to your pop-up. Finishes include, bonded metal or frosted acrylic canopies and frosted acrylic headers & wings. Countertop finishes include natural birch, silver phenolic and any standard color or style of laminate.
